Erasmus+ Programme  
of the European Union

## 1. Work Package and Task Description

The INTERBA project aims to adopt an innovative approach for creating a repository of knowledge capital and reshaping knowledge to deliver new insights and practices. In this respect, Work Package 2 (WP2) aims to create a coordination model that helps exploit the knowledge capital of all partner institutions effectively.

WP2 started from the results attained in WP1, which analyses the knowledge capital in partner countries, conducts a needs analysis and prioritizes internationalization areas. Considering these needs, WP2 established a method that helps to align knowledge capital cases to the uses that can bring clear benefits to other consortium institutions. Accordingly, WP2 is linked to WP6, whose goals are the following:

- Create links with local industry through a sustainability framework.
- Create synergies with WP2 to establish a sustainable network of trainers.
- Establish recognition of such training with each national entity (ministries) through certification or institutional recognition

### 1.1. Work Package Description

WP2 is articulated in the following three tasks:

T2.1: Creating a knowledge repository

T2.2: Creating a network of knowledge experts

T2.3: Introducing a bridging model to align knowledge cases to knowledge gaps

The work of WP2 is composed of the following main steps:

1. The definition of templates that describe the knowledge cases and the experts' profiles. This data will populate the Knowledge Repository (KR) and the Network of Experts (NoE) repository, respectively.
2. The selection of the most suitable technical infrastructure to create the repositories.
3. The creation and population of the repositories.
4. The definition of a model to bridge the gaps between existing knowledge capital and the knowledge capital cases to acquire.

This deliverable is specifically devoted to describing methods, actions and achieved results related to task **T2.1: Creating a knowledge repository**.

-

### 1.2. Task Description

Task 2.1: “Creating a knowledge repository” deals with collecting, cataloguing, systematizing and making available the wealth of knowledge that the partners possess and intend to share with the other partners.

This goal was achieved through the following steps:

- selection of the most suitable technical infrastructure to create the Knowledge Repository
- definition of template that describes the wealth of knowledge and all the related information
- with the partners' collaboration, use the template to collect all the information needs to populate the Knowledge Repository

## 2. Selection of the technical infrastructure for the Knowledge Repository

In this phase, the different alternatives available to create and manage the knowledge base were examined. We examined architectures consisting of an expressly created database and a web interface capable of conveying information to users (CMS-based systems), and a more lightweight architecture based on the use of ready-made tools, such as Google Forms and Google Sheets, or the equivalent tools provided by Microsoft (spreadsheet-based technologies). UNICA has firstly summarized the different solutions. Then, a survey has circulated among all the partners to receive their feedback.

The consortium has agreed on using a spreadsheet-based infrastructure to implement and populate the knowledge repository. Specifically, we decided to use Google tools. This way, it is possible to easily collect all the data gathered from PC partners and collect them into a semi-structured format that can be queried to extract further information. This choice will also allow partners to easily migrate to a different software architecture without losing the collected information.

## 3. Definition of the Knowledge template

The wealth of knowledge that the partners possess and intend to share with the other partners is formalized in terms of courses that partners can deliver. The purpose of this step was to define exactly which information about the available courses was relevant to the partners, for example the target of the courses, its duration, the available learning material, etc. For this reason, the partners' opinion was crucial, and this step has been carried out in synergy with all the partners. UNICA has first proposed and detailed the structure and fields of a form designed to collect all the courses information. Then, a survey has circulated among all the partners to receive feedback. This process has allowed finalising the template to collecting information about the available courses.

In the following, we present the final template designed following the indications the consortium has agreed.

Firstly, there are general fields, as shown in Table 1.

| General information         |                                |
|-----------------------------|--------------------------------|
| Title                       |                                |
| Description                 |                                |
| Duration                    | (number of hours)              |
| Credits                     | (number of ECTS credits)       |
| Format                      | (Face to face, Online, Hybrid) |
| Prerequisites               |                                |
| Target audience             |                                |
| EQF level                   |                                |
| Topic                       |                                |
| ISCED field (level 1- code) |                                |

|                                    |   |
|------------------------------------|---|
| ISCED field (level 1- description) |   |
| ISCED field (detail- code)         |   |
| ISCED field (detail- description)  |   |
| Main language                      |   |
| Potential Expert people            | (List of experts that can provide the training) |

Table 1 - Fields for general information of the courses

In this table, EQF refers to the European Qualifications Framework<sup>1</sup>. The course is categorised through two taxonomies: a broader one ("Topic" field) that follows the topics used in WP1 and a finer-grained one ("ISCED field") using the ISCED (International Standard Classification of Education<sup>2</sup>) classification.

The first two ISCED fields contain information about the principal ISCED Category, that is, the main level in the ISCED hierarchy. The information is reported as a 2-digit value, from 01 to 09 (the field **level 1- code**) and the related description (the field **level 1- description**).

The other two ISCED fields contain information about the level 3 in the ISCED hierarchy, if it is possible. The information is reported as a 4-digit value, from 01 to 09 (the field **detail- code**) and the related description (the field **detail- description**).

The available learning resources and support are detailed as in Table 2 and Table 3. The "notes" field may contain comments, the language of the material (if different from the main language of the course), details about the e-learning standard (e.g. SCORM, SLOOP).

| Teaching material | Y/N | Percentage of coverage of the course [Optional] | Notes [Optional] |
|-------------------|-----|---|------------------|
| PDF handouts      |     |   |                  |
| Scientific papers |     |   |                  |
| Video lectures    |     |   |                  |
| Tutorials         |     |   |                  |
| Other             |     |   |                  |

Table 2- Fields for teaching material associated to the course

| Student Learning Support | Y/N | Notes [Optional] |
|--------------------------|-----|------------------|
| Suggested books          |     |                  |
| Self-assessment tools    |     |                  |
| Homeworks or exercises   |     |                  |
| Other                    |     |                  |

<sup>2</sup> <http://uis.unesco.org/en/topic/international-standard-classification-education-isced>

Table 3 - Fields for the learning support material in the training template.

### 3. Populate the Knowledge Repository

The purpose of this step was to collect all the relevant information about the available courses, as defined in the previous step, and populate the Knowledge Repository. Various surveys were circulated among the partners to collect new data and validate the data already acquired. This process has allowed populating the Knowledge Repository. The acquired data are however always susceptible to integration, following the spirit of the project, so that the Knowledge Repository can be extended with the extension of the number of courses or learning material available.

Actually, the Knowledge Repository contains 56 courses (Table 4) divided into several ISCED Categories shown in Table 5 (main level in the ISCED hierarchy) and Table 6 (detail level in the ISCED hierarchy).

| PARTNER                            | N. Courses |
|------------------------------------|------------|
| University of Tirana (P1)          | 11         |
| European University of Tirana (P6) | 18         |
| Universum College (P7)             | 11         |
| University of Pristhina (P8)       | 3          |
| University of Tuzla (P9)           | 4          |
| University of Mostar (P10)         | 9          |
| <b>TOT</b>                         | <b>56</b>  |

Table 4 -Number of courses made available by partners

| ISCED CODE | ISCED DESCRIPTION                               | PARTNER   |           |           |          |          |          | N. Courses |

Table 6 – ISCED Category(level 3 in the ISCED hierarchy, where possible) of courses made available by partners

The collected information is shown in Appendix A.

## 4. Conclusion

During this task we have collected information about 56 courses made available by partners. The courses cover 9 ISCED main categories (level 1 of the ISCED hierarchy) and 19 ISCED sub categories. Many courses also provide educational material in various formats (i.e. PDF, videos, slides). All information deemed relevant by the partners about the courses was collected and stored into the knowledge repository for future integration and processing.

## Appendix A

Courses proposed by partners. The (\*) symbol indicates a working title.

| <b>Title</b>                 | The school climate   |
| <b>Description</b>           | <p>This module introduces participants to the school climate and the factors that influence to have a healthier social, emotional, and psychological climate in the school. The climate in the school is a very broad topic and depends a lot on what perception those who are in school have. The culture and climate in the school refer to the sum of values, culture, safe practices, as well as the organizational structuring within the school that make it function and react in different ways. Some schools are said to have an environment that recognizes children's values and treats them as special individuals; other schools may have an authoritarian structure where the rules are strictly enforced and the hierarchical control is quite strong. Teaching practices, changes, and relationships between staff, teachers, parents, and students contribute significantly to the school climate. The school climate refers in most cases to the effect that school has on students, while school culture refers more to how teachers and staff work together.</p> |

| <b>Title</b>                 | Integration of refugees   |
| <b>Description</b>           | <p>The refugees constitute a very heterogeneous group in terms of education, professional experience and socio-economic status. Integration challenges refugees face are: Language problems; Refugees have other priorities such as food, a safe place to live and making money; Refugees are not aware of the possibilities of validation; they might be scared of being assessed. As EU is facing high migration rate, their integration is a key issue. The goal of this training is to understand the importance of integration as a degree to which immigrants have the knowledge and capacity to build a successful and fulfilling life in the host society. On this training we will explore integration as</p> <p>§ As a legal process; As an economic process; As a social and cultural process.</p> |
| <b>Duration</b>              | 8   |

| <b>Title</b>                 | Energy efficiency in Chemical Processes by Pinch Analysis   |
| <b>Description</b>           | <p>This training is focused on improving energy efficiency in chemical processes by using systematic methodology based on the pinch analysis. The concept of pinch analysis, heat integration and heat exchanger network will be presented. Application of pinch analysis will be demonstrated on several case studies to determine the minimum utility consumption and the optimal design of heat exchanger network. The goal of this training is to demonstrate that significant savings in utility consumption (heating steam and cooling water) in manufacturing processes can be obtained by using systematic methodology based on the pinch analysis.</p> |

| <b>Title</b>                 | The Impact of COVID-19 on Students with Disabilities  |
| <b>Description</b>           | <p>The COVID-19 pandemic has affected students with disabilities at large public research institutions more than their peers, according to a surveys conducted by numerous educational, governmental, NGOs and other organisations and institutions. The course aims to present analysis of relevant researches and findings related to impact of the COVID-19 pandemic on different areas of student well-being: the ease of transition to remote learning, the financial impact of COVID-19, students' health during the pandemic, students' feeling of belonging and engagement, and their future plans post-COVID-19, and to propose possible service improvements in educational system and consequently in other related systems.</p> |
