## 1. Work Package and Task Description

The INTERBA project aims to adopt an innovative approach for creating a repository of knowledge capital and reshaping knowledge to deliver new insights and practices. In this respect, Work Package 2 (WP2) aims to create a coordination model that helps exploit the knowledge capital of all partner institutions effectively.

WP2 started from the results attained in WP1, which analyses the knowledge capital in partner countries, conducts a needs analysis and prioritizes internationalization areas. Considering these needs, WP2 established a method that helps to align knowledge capital cases to the uses that can bring clear benefits to other consortium institutions.

### 1.1. Work Package Description

WP2 is articulated in the following three tasks:

T2.1: Creating a knowledge repository

T2.2: Creating a network of knowledge experts

T2.3: Introducing a bridging model to align knowledge cases to knowledge gaps

The work of WP2 is composed of the following main steps:

1. The definition of templates that describe the knowledge cases and the experts' profiles. This data will populate the Knowledge Repository (KR) and the Network of Experts (NoE) repository, respectively.
2. The selection of the most suitable technical infrastructure to create the repositories.
3. The creation and population of the repositories.
4. The definition of a model to bridge the gaps between existing knowledge capital and the knowledge capital cases to acquire.

This deliverable is specifically devoted to describing methods, actions and achieved results related to task **T2.2: Creating a network of knowledge experts**.

-

### 1.2. Task Description

Task 2.2: “Creating a network of knowledge experts” deals with collecting, cataloguing, systematizing and making available all the information about experts in several fields that each partner can include among its resources. These experts represent a knowledge base directly usable for the purposes of the project.

This goal was achieved through the following steps:

- selection of the most suitable technical infrastructure to create the repository of experts.
- definition of template that describes the experts' profiles and all the related information
- with the partners' collaboration, use the template to collect all the information needs to populate the network of knowledge experts.

## 2. Selection of the technical infrastructure for the Repository

In this phase, the different alternatives available to create and manage the repository were examined. We examined architectures consisting of an expressly created database and a web interface capable of conveying information to users (CMS-based systems), and a more lightweight architecture based on the use of ready-made tools, such as Google Forms and Google Sheets, or the equivalent tools provided by Microsoft (spreadsheet-based technologies). UNICA has firstly summarized the different solutions. Then, a survey has circulated among all the partners to receive their feedback. Exactly as for the Knowledge Repository, the consortium has agreed on using a spreadsheet-based infrastructure to implement and populate the expert repository. We decided to use Google tools for this repository to ensure open communication between the two repositories (Knowledge and Experts). This way, it is possible to easily collect all the data gathered from PC partners and collect them into a semi-structured format that can be queried to extract further information. This choice will also allow partners to easily migrate to a different software architecture without losing the collected information.

## 3. Definition of the Expert template

The relevant elements of the expert's profile are defined in advance according with the partners' opinion. UNICA has first proposed and detailed the structure and fields of a form designed to collect the elements of the professional profile. Then, a survey has circulated among all the partners to receive feedback. This process has allowed finalising the template to collecting information about the experts. In the following, we present the final template designed following the indications the consortium has agreed.

Table 1 shows the personal and professional information about the expert.

<b>First name</b>
<b>Family name</b>

<b>Years of experience in specific teaching</b>
<b>Years of experience in research</b>
<b>Publications</b>
<b>Other useful experiences or skills</b>
<b>Years of experience for other skills</b>

*Table 1 – Personal and professional information about the expert*

Table 2 shows ESCO and ISCED keywords characterizing the expert.

ESCO (European Skills, Competences, Qualifications and Occupations) <sup>(1)</sup> is the European multilingual classification of Skills, Competences and Occupations. ESCO works as a dictionary, describing, identifying and classifying professional occupations and skills relevant for the EU labour market and education and training. Those concepts and the relationships between them can be understood by electronic systems, which allows different online platforms to use ESCO for services like matching jobseekers to jobs on the basis of their skills, suggesting trainings to people who want to reskill or upskill etc.

ISCED (International Standard Classification of Education) <sup>(2)</sup> classification is the reference classification for organizing education programmes and related qualifications by education levels and fields. ISCED is a product of international agreement and adopted formally by the General Conference of UNESCO Member States. It is designed to serve as a framework to classify educational activities as defined in programmes and the resulting qualifications into internationally agreed categories.

<b>Keywords for expert's Knowledge (K) from ESCO (European Skills, Competences, Qualifications and Occupations) classification</b>
<b>ISCED fields of specific teaching experience</b>
<b>ISCED fields of research interests</b>

*Table 2 – Keywords characterizing the expert.*

### 3. Populate the Expert Repository

This step aimed to collect all the relevant information about the experts, as defined in the previous step, and populate the Expert Repository. Various surveys were circulated among the partners to collect new data and validate the data already acquired. This process has allowed populating the Expert Repository. The acquired data are always susceptible to integration, following the spirit of the project, so that the Expert Repository can be extended with the availability of other experts.

This process made it possible to survey 82 experts (Table 3) and collect information about their skills. A substantial part of these experts (58 out of 82) is available as reference experts for one or more courses indicated in Deliverable 2.1.

<sup>1</sup> <http://data.europa.eu/esco/skill/K>

University of Mostar (P10)	14
<b>TOT</b>	<b>82</b>

*Table 3 -Number of experts for each partner*

The collected information is shown in Appendix A.

## 4. Conclusion

During this task we have collected information about 82 experts that collaborate with the partners. The skills made available by the experts can be cataloged through two distinct sets of keywords, ESCO and ISCED. A substantial part of these experts is available as reference experts for one or more courses proposed by the partners. All information deemed relevant by the partners about the experts was collected and stored into the Expert repository for future integration and processing.

Albania

I have 25 years of experience in the field of Education, and currently, I am a full-time lecturer in the Department of Pedagogy-Psychology, at the Faculty of Social Sciences, University of Tirana. After completing master's and doctoral studies at the University of Tirana in the field of pedagogy, I completed a postdoctoral fellowship in the United States of America, as a holder of the Fulbright Scholarship. I was a guest lecturer at the Faculty of Education at the University of Granada in Spain, as well as at Salem State University, Massachusetts, USA. Among other things, I have several years of experience as an expert of the Quality Assurance Agency in Higher Education, in the framework of the accreditation of study programs in the field of Education. My areas of interest are pedagogy and didactics, quantitative and qualitative research methods in the social sciences, as well as the ongoing preparation and training of teachers.

My name is Xhakina Cani and I have concluded my Bachelor studies, in Industrial and Environment Chemistry, during 2007-2010, in the Department of Industrial Chemistry, Faculty of Natural Sciences at the University of Tirana, Albania. In 2012 I finished my Master of Science studies in Chemical Process Engineering at the same Department. During 2013-2017 I concluded my PhD studies at the Faculty of Natural Sciences at the University of Tirana with subject of the petroleum engineering and my PhD thesis title was: "Application techniques of modeling and simulation processes from optimal crude oil characterization in our country". Until now in my career i have been holding the position of lector in the Chemical Process Engineering Group, Department of Industrial Chemistry, Faculty of Natural Science, University of Tirana, Albania, since 2013. I'm mainly focused on Unit Operation, Simulation, Optimization of Chemical Processes.

Excellent computer skills related to computer-aided tools for simulation, modelling and optimization of chemical processes. These skills were gained through training, work and research in the field of process systems engineering.

Excellent team work skills. Excellent ability to adapt to multicultural environments, and establish and maintain good working relations with people of different national and cultural backgrounds. These skills were gained through my study visits in several mobility programmes (Fulbright Visiting Scholar Program, JoinEU-SEE Program, EM2-STEM Program, DAAD Program, CEEPUS and Erasmus+ Program) and work in several international and domestic research projects.

Excellent organisational and management skills.

- Vice dean for education at Faculty of Technology, University of Tuzla
- Team leader and coordinator of several research projects (Bilateral projects between Bosnia and Herzegovina and Slovenia and Bosnia and Herzegovina and Austria)
- Team leader of Tuzla research group in the international project SCOPES (Scientific Co-operation between Eastern Europe and Switzerland), 2014-2017)
- Team leader and coordinator of several domestic research projects realized in Bosnia and Herzegovina
- Coordinator of CEEPUS project at the University of Tuzla, 2012- .
- Coordinator of Erasmus+ project, "INTERnationalization at Home: Embedding Approaches and Structures to Foster Internationalization at Western Balkans/ INTERBA", at the University of Tuzla 2019-.
- Advisor of bachelor, master and doctoral theses

Excellent written and oral communication skills gained through:

- Teaching and research experience and dissemination of knowledge at university
- Presentation of research results at international conferences and publication in high impact journals
- Work in international research teams

Enxhi Turku

enxhi.turku@unitir.edu.al

Albania

<p>I have a bachelor degree in Business Administration and a Master degree in Marketing from the Faculty of Economy, University of Tirana. In 2015-2016 I have studied an MBA in International Marketing in European Business School in Barcelona, a city where I have had my first full time job (after a few internships in Albania and Spain while studying) as part of the Deliverability team in Natexo, an international marketing agency specialized in email marketing. I returned in Albania in 2019 where I worked for almost two years at the Marketing department in Coca-Cola, as the only responsible for Commercial projects such as Plant Visit. As of February 2021 I am now part of the academic staff of the Faculty of Economy, as an Assistant Lecturer at the Marketing and Tourism department. I speak fluently English Spanish and Italian and social media as one of the most influential and powerful means of communication today interests me.</p>
