Co-funded by the  
Erasmus+ Programme  
of the European Union

**INTERBA**

With the support of the  
Erasmus+ Programme  
of the European Union

## 1. Work Package and Task Description

The INTERBA project aims to adopt an innovative approach to creating a repository of knowledge capital and reshaping knowledge to deliver new insights and practices. In this respect, Work Package 2 (WP2) aims to create a coordination model that helps exploit the knowledge capital of all partner institutions effectively.

WP2 started from the results attained in WP1, which analyses the knowledge capital in partner countries, conducts a needs analysis and prioritizes internationalization areas. Considering these needs, WP2 established a method that helps to align knowledge capital cases to the uses that can bring clear benefits to other consortium institutions. Accordingly, WP2 is linked to WP6, whose goals are the following:

- Create links with local industry through a sustainability framework.
- Create synergies with WP2 to establish a sustainable network of trainers.
- Establish recognition of such training with each national entity (ministries) through certification or institutional recognition

### 1.1. Work Package Description

WP2 is articulated in the following three tasks:

T2.1: Creating a knowledge repository

T2.2: Creating a network of knowledge experts

T2.3: Introducing a bridging model to align knowledge cases to knowledge gaps

The work of WP2 is composed of the following main steps:

1. The definition of templates that describe the knowledge cases and the experts' profiles. This data will populate the Knowledge Repository (KR) and the Network of Experts (NoE) repository, respectively.
2. The selection of the most suitable technical infrastructure to create the repositories.
3. The creation and population of the repositories.
4. The definition of a model to bridge the gaps between existing knowledge capital and the knowledge capital cases to acquire.

This deliverable is specifically devoted to describing methods, actions and achieved results related to task **T2.1: Creating a knowledge repository**.

-

### 1.2. Task Description

Task 2.1: “Creating a knowledge repository” deals with collecting, cataloguing, systematising and making available the wealth of knowledge that the partners possess and intend to share with the other partners.

This goal was achieved through the following steps:

- selection of the most suitable technical infrastructure to create the Knowledge Repository
- definition of template that describes the wealth of knowledge and all the related information
- with the partners' collaboration, use the template to collect all the information needs to populate the Knowledge Repository

## 2. Selection of the technical infrastructure for the Knowledge Repository

The different alternatives available to create and manage the knowledge base were examined in this phase. We examined architectures consisting of an expressly created database and a web interface capable of conveying information to users (CMS-based systems), and a more lightweight architecture based on the use of ready-made tools, such as Google Forms and Google Sheets, or the equivalent tools provided by Microsoft (spreadsheet-based technologies). UNICA has first summarized the different solutions. Then, a survey has circulated among all the partners to receive their feedback.

The consortium has agreed on using a spreadsheet-based infrastructure to implement and populate the knowledge repository. Specifically, we decided to use Google tools. This way, it is possible to easily collect all the data gathered from PC partners and collect them into a semi-structured format that can be queried to extract further information. This choice will also allow partners to easily migrate to a different software architecture without losing the collected information.

## 3. Definition of the Knowledge template

The wealth of knowledge the partners possess and intend to share with the other partners is formalized in terms of the courses that partners can deliver. The purpose of this step was to define exactly which information about the available courses was relevant to the partners, for example the target of the courses, its duration, the available learning material, etc. For this reason, the partners' opinion was crucial, and this step has been carried out in synergy with all the partners. UNICA has first proposed and detailed the structure and fields of a form designed to collect all the courses information. Then, a survey has circulated among all the partners to receive feedback. This process has allowed finalising the template to collect information about the available courses.

In the following, we present the final template designed following the indications the consortium has agreed.

Firstly, there are general fields, as shown in Table 1.

General information	
Title	
Description	
Duration	(number of hours)
Credits	(number of ECTS credits)
Format	(Face to face, Online, Hybrid)
Prerequisites	
Target audience	
EQF level	
Topic	
ISCED field (level 1- code)	

ISCED field (level 1- description)	
ISCED field (detail- code)	
ISCED field (detail- description)	
Main language	
Potential Expert people	(List of experts that can provide the training)

Table 1 - Fields for general information of the courses

In this table, EQF refers to the European Qualifications Framework<sup>1</sup>. The course is categorised through two taxonomies: a broader one ("Topic" field) that follows the topics used in WP1 and a finer-grained one ("ISCED field") using the ISCED (International Standard Classification of Education<sup>2</sup>) classification.

The first two ISCED fields contain information about the principal ISCED Category, that is, the main level in the ISCED hierarchy. The information is reported as a 2-digit value, from 01 to 09 (the field **level 1- code**) and the related description (the field **level 1- description**).

The other two ISCED fields contain information about the level 3 in the ISCED hierarchy, if it is possible. The information is reported as a 4-digit value, from 01 to 09 (the field **detail- code**) and the related description (the field **detail- description**).

The available learning resources and support are detailed as in Table 2 and Table 3. The "notes" field may contain comments, the language of the material (if different from the main language of the course), details about the e-learning standard (e.g., SCORM, SLOOP).

<sup>2</sup> <http://uis.unesco.org/en/topic/international-standard-classification-education-isced>

Table 3 - Fields for the learning support material in the training template.

### 3. Populate the Knowledge Repository

The purpose of this step was to collect all the relevant information about the available courses, as defined in the previous step, and populate the Knowledge Repository. Various surveys were circulated among the partners to collect new data and validate the data already acquired. This process has allowed populating the Knowledge Repository. The acquired data are however always susceptible to integration, following the spirit of the project, so that the Knowledge Repository can be extended with the extension of the number of courses or learning material available. For the proposed courses, the partners have also indicated one or more experts who could take charge of the course.

Actually, the Knowledge Repository contains 86 courses (Table 4) divided into several ISCED Categories shown in Table 5 (main level in the ISCED hierarchy).

PARTNER	N. Courses
University of Tirana (P1)	19
European University of Tirana (P6)	28
Universum College (P7)	15

Table 5 – ISCED Category (main level in the ISCED hierarchy) of courses made available by partners

The collected information is shown in Appendix A.

## 4. Conclusion

During this task we have collected information about 86 courses made available by partners. The courses cover 9 ISCED main categories (level 1 of the ISCED hierarchy) and 37 ISCED sub-categories. Many courses also provide educational material in various formats (i.e., PDF, videos, slides). All information deemed relevant by the partners about the courses was collected and stored in the knowledge repository for future integration and processing.

With the support of the  
Erasmus+ Programme  
of the European Union

<b>Title</b>	Integration of refugees
<b>Description</b>	The refugees constitute a very heterogeneous group in terms of education, professional experience and socio-economic status. Integration challenges refugees face are: Language problems; Refugees have other priorities such as food, a safe place to live and making money; Refugees are not aware of the possibilities of validation; they might be scared of being assessed. As EU is facing high migration rate, their integration is a key issue. The goal of this training is to understand the importance of integration as a degree to which immigrants have the knowledge and capacity to build a successful and fulfilling life in the host society. On this training we will explore integration as § As a legal process; As an economic process; As a social and cultural process.

<b>Title</b>	Digital Transformation at Albanian Universities (IT Governance for Albanian Universities)
<b>Description</b>	<p>The main aim of this course is to have an overall view about Albanian universities vision and strategy regarding digital transformation.</p> <p>Objective 1: Explanation and investigation of the impact of people's digital culture (staff, academics and students) in the rapid development and release of new technologies, and also the lack of trust in digital services and cloud technologies, or concerns about their reliability, security and resilience. The research question for this objective would be: "Are factors such culture or lack of trust in digital services seen as barriers when going digital?".</p> <p>Objective 2: Having a deep insight on digital activities in the universities. In more details, processes such as operational services, online and distance learning, student digital portfolios, are included in the strategic and operational planning. The university strategy will be analysed to categorize it as conservative, innovative or transformative. The research question for this objective would be: "Is there a linkage between all digital activity and the university's overall vision and strategy?".</p> <p>Objective 3: Analysis for the implemented layers of incentives for communities such as staff, academics and students to increase the willingness and capacity of these groups related to arguments of digital management, digital innovation, digital governance and digital transformation. The research question for this objective would be: "Can incentives help the communities built around willing and capable digital innovators?".</p>

<b>Title</b>	The school climate
<b>Description</b>	<p>This module introduces participants to the school climate and the factors that influence to have a healthier social, emotional, and psychological climate in the school. The climate in the school is a very broad topic and depends a lot on what perception those who are in school have. The culture and climate in the school refer to the sum of values, culture, safe practices, as well as the organizational structuring within the school that make it function and react in different ways. Some schools are said to have an environment that recognizes children's values and treats them as special individuals; other schools may have an authoritarian structure where the rules are strictly enforced and the hierarchical control is quite strong. Teaching practices, changes, and relationships between staff, teachers, parents, and students contribute significantly to the school climate. The school climate refers in most cases to the effect that school has on students, while school culture refers more to how teachers and staff work together.</p>
<b>Duration</b>	3 days (21 teaching hours)

<b>PARTNER</b>	Universum College (P7)
<b>Title</b>	Universum Blockchain Institute
<b>Description</b>	Blockchain Institute is only offered by Universum College in Kosovo. The aim of Blockchain is to train participants in research, financial analysis, cryptocurrencies, international financial markets and so on. Blockchain institute develops experts in the aforementioned fields, thus enabling participants to be successful in their investments, risk managements and financial forecast.
<b>Duration</b>	3
<b>Credits</b>	
<b>FORMAT</b>	
<b>Prerequisites</b>	Basic knowledge on computer science and finance
<b>Target audience</b>	Profesionasls working in the finance sector
<b>EQF LEVEL</b>	3

<b>Title</b>	Application of ICT technologies in agriculture (Internet of things in agriculture)
<b>Description</b>	<p>The training in this course is focused to deliver information and communication technologies to students and to show possibilities for application in agriculture. This course aims to introduce students and other stakeholders to the basics of applying information and communication technologies in agriculture.</p> <p>In the first introductory part, sensors and communication systems are presented as units that form an integral part of all other units presented in this course. IoT systems are demonstrated through four lectures and include information from sensors to final applications located on user terminals. Each unit includes four lectures, and students have access to video lectures and presentations that accompany these lectures. Objectives of this course are:</p> <ol style="list-style-type: none"> <li>1. OBJECTIVE 1: Introduction to the special requirements of the application of IoT systems in agriculture</li> <li>2. OBJECTIVE 2: Adaptation of sensor nodes to agricultural processes</li> <li>3. OBJECTIVE 3: Connect sensor nodes to cloud systems and mobile applications</li> </ol>
<b>Duration</b>	2 days (10 teaching hours)
<b>Credits</b>	1 - (25 hours – 10 teaching hours and 15 self-learning hours)
<b>FORMAT</b>	
<b>Prerequisites</b>	N/A
<b>Target audience</b>	Staff members, students, teachers, researchers
<b>EQF LEVEL</b>	4
<b>TOPICS &amp; number of hours per topic</b>	<p>T1. Introduction to the principles of operation and design of smart systems in agriculture. Application of sensors to IoT systems in agriculture (3 hours)</p> <p>T2. Development of sensor nodes on educational platforms (Arduino and Raspberry Pi) (3 hours)</p> <p>T3. Development of cloud applications and applications on smartphones (4 hours)</p>

<b>Title</b>	Combined Water and Energy integration in the Process Industries
<b>Description</b>	<p>This course studies the characteristics and features of the learning process, learning principles, determining the content of learning, organizational forms of teaching and learning, teaching methods and learning methods. Objectives of this course are:</p> <p>1. OBJECTIVE 1: To increase public awareness of science in everyday life  2. OBJECTIVE 2: To use a variety of video and sound capturing and editing techniques  3. OBJECTIVE 3: To make a significant impact on learning</p>
<b>Duration</b>	2 days (10 teaching hours)
<b>Credits</b>	1 - (25 hours – 10 teaching hours and 15 self-learning hours)
<b>FORMAT</b>	
<b>Prerequisites</b>	N/A
<b>Target audience</b>	Staff members; researchers; undergraduate students;
<b>EQF LEVEL</b>	4
<b>TOPICS &amp; number of hours per topic</b>	<p>T1. Global water and energy consumption and sustainability (2 hours)  T2. Water and energy use in manufacturing processes (2 hours )  T3. Concepts of combined water and energy networks (2 hours)  T4. Systematic methods for combined water and energy integration (2 hours )  T5. Systematic methods for combined water and energy integration (2 hours)</p>

<b>Title</b>	Energy efficiency in Chemical Processes by Pinch Analysis
<b>Description</b>	<p>This course is focused on improving energy efficiency in chemical processes by using systematic methodology based on the pinch analysis. The concept of pinch analysis, heat integration and heat exchanger network will be presented. Application of pinch analysis will be demonstrated on several case studies to determine the minimum utility consumption and the optimal design of heat exchanger network. The main goal of this course is to demonstrate that significant savings in utility consumption (heating steam and cooling water) in manufacturing processes can be obtained by using systematic methodology based on the pinch analysis. Objectives of this course are:</p> <p>1. OBJECTIVE 1: To increase awareness about energy savings in manufacturing processes</p> <p>2. OBJECTIVE 2: To increase awareness about methods for improving energy efficiency in manufacturing processes</p> <p>3. OBJECTIVE 3: To demonstrate the concept and application of pinch analysis for reduction of utility consumption and design of heat exchangers in manufacturing processes</p>
<b>Duration</b>	2 days (10 teaching hours)
<b>Credits</b>	1 - (25 hours – 10 teaching hours and 15 self-learning hours)
<b>FORMAT</b>	
<b>Prerequisites</b>	N/A
<b>Target audience</b>	Staff members; researchers; undergraduate students;
<b>EQF LEVEL</b>	4
<b>TOPICS &amp; number of hours per topic</b>	<p>T1. Heat recovery and heat exchange (2 hours)</p> <p>T2. Targeting procedure for determining minimal utility consumption (4 hours )</p> <p>T3. Synthesis and design of heat exchanger networks (4 hours)</p>

<b>Title</b>	Implementation of new tools for the quality assessment of study programs (KREF) in pharmacy studies
<b>Description</b>	<p>The training is focused to the introduction of new tools for the quality assessment of study programs (KREF) and the development of evidence-based recommendations for changes, modification and innovations of the existing methods of knowledge transfer, teachers' didactic approaches and syllabi and the introduction of new system of knowledge assessment gained through the EE course (OSCE) that sets equal standards at the national level for learning outcomes of pharmacy graduates. Objectives of this course are:</p> <p>1. OBJECTIVE 1: Development of academic staff professional and pedagogical competencies for more interactive and practical approach to delivery/teaching and assessment of the existing pharmacy curricula through the exchange of best practices between partner and programme institutions and active involvement of major stakeholders in real sector</p> <p>2. OBJECTIVE 2: Improvement of courses delivery through the introduction of assessment tests – Knowledge Retention Evaluation Framework (KREF) and Objective Structured Clinical Examination (OSCE) for pharmacy students</p> <p>3. OBJECTIVE 3: Improvements in experiential education (EE) educators' (pharmaceutical professionals) training and development of E-platform for EE management and administration</p>
<b>Duration</b>	2 days (10 teaching hours)

<b>Title</b>	Internet of Things Systems
<b>Description</b>	<p>Within the course IoT systems, students learn the basic concept of IoT systems, its potential application and possibilities for future developments in this field. The second part deals in more detail with individual segments of the IoT system: Sensor node, cloud applications and the development of mobile applications for IoT systems. The second part is focused on students who have prior knowledge in the field of computer science and knowledge of basic programming languages. Objectives of this course are:</p> <p>1. OBJECTIVE 1: Introduction to the principles of operation and design of smart systems (smart homes, smart energy systems, smart systems in health, agriculture, ..)</p> <p>2. OBJECTIVE 2: Teaching students to design a network of smart device systems with the implementation of platforms and intelligent environments</p> <p>3. OBJECTIVE 3: Practical work on the development of solutions for various areas of application of IoT technology</p>
<b>Duration</b>	2 days (10 teaching hours)
<b>Credits</b>	1 - (25 hours – 10 teaching hours and 15 self-learning hours)
<b>FORMAT</b>	
<b>Prerequisites</b>	Programing languages C and C++

<b>Title</b>	Lifelong learning in higher education - the connection between higher education, students and the labor market
<b>Description</b>	<p>This training is intended to the universities that recognize the need to shift from focusing mostly on younger full-time students to offering career-development skills to a wide variety of nontraditional learners - adult learners, veterans, and part-time students — are changing how they teach. Objectives of this course are:</p> <p>1. OBJECTIVE 1: Define a legal framework that will support the development and implementation of part-time and short-cycle studies in higher education</p> <p>2. OBJECTIVE 2: Develop online and conventional (face-to-face) learning methodologies and technologies for part-time and short-cycle studies, tailored to adults and employed students</p> <p>3. OBJECTIVE 3: Implementation of five part-time and short-cycle studies (online and face-to-face)</p>
<b>Duration</b>	2 days (10 teaching hours)

<b>Title</b>	Video editing and camera tracking
<b>Description</b>	<p>This training is focused on combined water and energy integration in the process industries. The concept of water and energy networks and corresponding optimization models will be presented. Application of optimization models will be demonstrated on several case studies. The main goal of this training is to demonstrate that significant savings in water and energy consumption can be obtained by simultaneous optimization of water and energy in manufacturing processes. Objectives of this course are:</p> <p>1. OBJECTIVE 1: To provide knowledge about the global consumption of water and energy</p> <p>2. OBJECTIVE 2: To increase awareness about sustainable consumption and the use of natural resources and environmental protection</p> <p>3. OBJECTIVE 3: To explain concepts of water and energy integration and designing optimal water and energy networks</p>
