1. Work Package and Task Description

The INTERBA project aims to adopt an innovative approach for creating a repository of knowledge capital and reshaping knowledge to deliver new insights and practices. In this respect, Work Package 2 (WP2) aims to create a coordination model that helps exploit the knowledge capital of all partner institutions effectively.

WP2 started from the results attained in WP1, which analyses the knowledge capital in partner countries, conducts a needs analysis and prioritizes internationalization areas. Considering these needs, WP2 established a method that helps to align knowledge capital cases to the uses that can bring clear benefits to other consortium institutions.

1.1. Work Package Description

WP2 is articulated in the following three tasks:

T2.1: Creating a knowledge repository

T2.2: Creating a network of knowledge experts

T2.3: Introducing a bridging model to align knowledge cases to knowledge gaps

The work of WP2 is composed of the following main steps:

1. The definition of templates that describe the knowledge cases and the experts' profiles. This data will populate the Knowledge Repository (KR) and the Network of Experts (NoE) repository, respectively.
2. The selection of the most suitable technical infrastructure to create the repositories.
3. The creation and population of the repositories.
4. The definition of a model to bridge the gaps between existing knowledge capital and the knowledge capital cases to acquire.

This deliverable is specifically devoted to describing methods, actions and achieved results related to task **T2.2: Creating a network of knowledge experts**.

-

1.2. Task Description

Task 2.2: “Creating a network of knowledge experts” deals with collecting, cataloguing, systematizing and making available all the information about experts in several fields that each partner can include among its resources. These experts represent a knowledge base directly usable for the purposes of the project.

This goal was achieved through the following steps:

- selection of the most suitable technical infrastructure to create the repository of experts.
- definition of template that describes the experts' profiles and all the related information
- with the partners' collaboration, use the template to collect all the information needs to populate the network of knowledge experts.

2. Selection of the technical infrastructure for the Repository

In this phase, the different alternatives available to create and manage the repository were examined. We examined architectures consisting of an expressly created database and a web interface capable of conveying information to users (CMS-based systems), and a more lightweight architecture based on the use of ready-made tools, such as Google Forms and Google Sheets, or the equivalent tools provided by Microsoft (spreadsheet-based technologies). UNICA has firstly summarized the different solutions. Then, a survey has circulated among all the partners to receive their feedback. Exactly as for the Knowledge Repository, the consortium has agreed on using a spreadsheet-based infrastructure to implement and populate the expert repository. We decided to use Google tools for this repository to ensure open communication between the two repositories (Knowledge and Experts). This way, it is possible to easily collect all the data gathered from PC partners and collect them into a semi-structured format that can be queried to extract further information. This choice will also allow partners to easily migrate to a different software architecture without losing the collected information.

3. Definition of the Expert template

The relevant elements of the expert's profile are defined in advance according with the partners' opinion. UNICA has first proposed and detailed the structure and fields of a form designed to collect the elements of the professional profile. Then, a survey has circulated among all the partners to receive feedback. This process has allowed finalising the template to collecting information about the experts. In the following, we present the final template designed following the indications the consortium has agreed.

Table 1 shows the personal and professional information about the expert.

Table 1 – Personal and professional information about the expert

Table 2 shows ESCO and ISCED keywords characterizing the expert.

ESCO (European Skills, Competences, Qualifications and Occupations)⁽¹⁾ is the European multilingual classification of Skills, Competences and Occupations. ESCO works as a dictionary, describing, identifying and classifying professional occupations and skills relevant for the EU labour market and education and training. Those concepts and the relationships between them can be understood by electronic systems, which allows different online platforms to use ESCO for services like matching jobseekers to jobs on the basis of their skills, suggesting trainings to people who want to reskill or upskill etc.

ISCED (International Standard Classification of Education)⁽²⁾ classification is the reference classification for organizing education programmes and related qualifications by education levels and fields. ISCED is a product of international agreement and adopted formally by the General Conference of UNESCO Member States. It is designed to serve as a framework to classify educational activities as defined in programmes and the resulting qualifications into internationally agreed categories.

Keywords for expert's Knowledge (K) from ESCO (European Skills, Competences, Qualifications and Occupations) classification
ISCED fields of specific teaching experience
ISCED fields of research interests

Table 2 – Keywords characterizing the experts.

3. Populate the Expert Repository

This step aimed to collect all the relevant information about the experts, as defined in the previous step, and populate the Expert Repository. Various surveys were circulated among the partners to collect new data and validate the data already acquired. This process has allowed populating the Expert Repository. The acquired data are always susceptible to integration, following the spirit of the project, so that the Expert Repository can be extended with the availability of other experts.

This process made it possible to survey 105 experts (Table 3) and collect information about their skills. These experts are available as reference experts for one or more courses indicated in Deliverable 2.1.

Table 3 -Number of experts for each partner

The collected information is shown in Appendix A.

4. Conclusion

During this task we have collected information about 105 experts that collaborate with the partners. The skills made available by the experts can be catalogued through two distinct sets of keywords, ESCO and ISCED. These experts are available as reference experts for one or more courses proposed by the partners. All information deemed relevant by the partners about the experts was collected and stored in the Expert repository for future integration and processing.

Curriculum vitae	Muhamet Hajdari is a dedicated male professional who currently holds the position of Assistant Professor at Universum College. With a strong educational background, he earned his Bachelor's Degree in Management & Informatics from the University of Prishtina, Kosovo, followed by a Master's Degree in Management & Informatics from Iliria College, Kosovo. His pursuit of academic excellence led him to complete a PhD in Economics & Management at the Agricultural University of Plovdiv, Bulgaria. Muhamet has made significant contributions to the field of economics and management through a series of research papers, including his 2020 work titled "BUSINESS CHALLENGES IN IMPLEMENTING SOCIAL MEDIA MARKETING," published in the Journal of Biobased Marketing, which he co-authored. Beyond academia, Muhamet has an extensive 13-year career in the banking industry, with roles ranging from Business Client Relationship Officer to Branch Manager, showcasing his practical expertise. Moreover, he has actively shared his knowledge as a lecturer at ISPE College, teaching subjects such as Insurance Economics and Financial Analysis, before assuming his current role as Assistant Professor, where he imparts his wisdom on subjects related to Public Finance and Management Accounting. His commitment to professional development is evident in his involvement in various projects, including "Lean in Branches" and "Behavioral Economics," both at Raiffeisen Bank Kosovo, where he played key roles. Muhamet Hajdari's academic achievements, industry experience, and passion for teaching make him a valuable asset to both the academic and business communities.

During these 4 years of experience the engagement was in the following subjects: European Economics Integration and International Economics. He has an extensive experience of 22 years on managing several international projects in the field of Higher Education in Kosovo and other Western Balkan countries. The projects are mainly funded by European Commission, USAID, Austrian government. He is member of Higher Education Reform Experts Team of Kosovo (HERE Kosovo), and in different professional bodies related to the Higher Education in Kosovo. In addition, he has been part of the team for drafting Law on Higher Education of Kosovo; the Strategy for the Higher Education of Kosovo for the period 2005-2015; R&D Strategy for University of Prishtina; QA strategies for public and private HE institutions in Kosovo. He is a distinguished Kosovar expert in the field of higher education.

Curriculum vitae	Dr. Dhuratë Hyseni, in 2009 received the B.Sc. degree in Faculty of Computer Science from the South East European University in Macedonia, in 2012 completed her Master's Degree and was awarded the title Master of Computer Science Majoring in Database Management. On 09.03.2018 successfully completed her PhD studies and was awarded the title Doctor of Computer Science in e-Technology. Now she is assistant professor at the University of Prishtina "Hasan Prishtina", Faculty of Electrical and Computer Engineering, elected on 1 October 2020. Before being part of UP, she worked as assistant professor in different public and private universities in Kosovo, also from 2008-2015 has worked as a software design and development. From 2020 she is Project Coordinator of SMART4ALL for University "Ukshin Hoti" Prizren, supported by EU, Horizon 2020. Also she has been a member of some scientific projects. She has published numerous scientific research in research magazines and international conferences indexed in different platforms such as Scopus, Web of Science, Springer etc.

Curriculum vitae	Dr. Zana Limani Fazliu received the B.Sc. degree in Telecommunication from Faculty of Electrical and Computer Engineering (FECE), University of Prishtina, in 2008, the M.Sc. degree in Telecommunications from the Universitat Politècnica de Catalunya (Spain) / Politecnico di Torino (Italy) in 2010 and the PhD degree from Politecnico di Torino in 2017. Her research areas include wireless communications, mmwave communications, next-generation communication networks, game theory and machine learning applications. In October 2021, she joined the Telecommunications department at FECE, University of Prishtina as a full-time assistant professor, where she previously worked as a part-time adjunct teaching assistant/lecturer since 2011. Outside of academia, she has extensive professional experience in civil aviation, advanced safety management systems and auditing techniques. She has been member of several scientific projects at FECE, in particular capacity-building projects such as: “Accelerating Western Balkans University Modernization by Introducing Virtual Technologies”, “Developing Research and Innovation Capacities in Albania and Kosovo”, “Development and Implementation of Multimedia and Digital TV Curricula” and “Internationalization at Home: Embedding Approaches and Structures to Foster Internationalization at Western Balkans”, Erasmus + projects supported by EU. She has authored and co-authored several international journal and conference papers and is a member of IEEE.

Curriculum vitae	<p>Elvis Ahmetović works as a Full Professor in Chemical Engineering at the University of Tuzla. He obtained his B.Sc. and M.Sc. degree in Chemical Engineering at the same University, and Ph.D. degree in Process Engineering. After working at the University of Tuzla as an assistant in chemical engineering, he was promoted to positions, a senior assistant, an assistant professor, an associate professor and a full professor. He was a Vice-Dean for Education and Students Affairs at the Faculty of Technology. He was a Fulbright Visiting Scholar at the Carnegie Mellon University, PA (U.S.), and a JoinEU SEE scholar at the University of Maribor (Slovenia). He was awarded by the DAAD and by the EM2-STEM. He was employed as a visiting professor at the University of Maribor. He participated in Erasmus+ mobilities and delivered lectures at different universities. His research interests are related to the analysis, synthesis and design of chemical processes. He is the author or co-author of 7 books, 3 book chapters, and over 100 papers published in journals and conference proceedings, and presented at international conference. His papers have been cited more than 1080 times. He received the best paper award at the SDEWES Conference. His paper published in the AIChE Journal is one of the most cited papers. He was awarded the Federal Award for Science by the Government of the Federation of Bosnia and Herzegovina. He has been a reviewer for 17 international journals and a member of the Scientific Advisory Boards of 20 international conferences. He is a Guest Editor for the Frontiers. He has been an invited speaker and participant at international conferences and a leader in many projects. He is currently a leader of three international projects at the University of Tuzla, and the President of Cantonal Council for Science and Technology.</p>

Curriculum vitae	Alma Šećerbegović received a doctoral degree from the University of Tuzla, Bosnia and Herzegovina, in 2018. She is currently an Assistant Professor at the University of Tuzla, Faculty of Electrical Engineering. Her research includes biomedical signal processing, non-contact physiological parameter extraction, and algorithms for signal and data analysis. Alma Šećerbegović published two professional national books, about 30 papers in journals and conferences, and participated in different research projects. She has worked on developing graduate and undergraduate courses in the areas of telecommunications, Internet of things, Web, and mobile applications. She is a founder of the NGO "GirlThing" with the main goal to encourage girls to find a career in the ICT domain.
